## 1. DOCUMENT PURPOSE

This release note document describes the contents of the v1 starter kit release for the Diageo Digital Product (DDP). It covers what has been included, specific items that are not included as well as any known issues at the time of release.

All relevant documentation for this project can be found by visiting the following. This will all be added shortly to a single website (URL to follow).

- Honeycomb Figma file - visual representation of the design system that forms the v1 starter kit -  
<https://www.figma.com/files/1052595589174129541/team/1066306038223384920/DBA?fuid=862364444451793295>
- Storybook - frontend developer toolkit/documentation -  
<http://diageo-scalable-product.s3-website-eu-west-1.amazonaws.com/docs/ui/storybook/>
- Docusaurus - detailed developer documentation around NPM packages, services, components, config etc -  
<http://diageo-scalable-product.s3-website-eu-west-1.amazonaws.com/docs/>
- Demo site (will move to a new environment in a few weeks) -  
<https://ddpdev1.diageoplatform.com/en-gb/home>
- Content editor documentation - explains how to use the Umbraco components as a content editor -  
[https://docs.google.com/presentation/d/1yQ6ikMQByTNS4\\_TCfdrkvY46LX61H8tJWfHOuZUZwNs/edit#slide=id.gd5219698b6\\_0\\_222](https://docs.google.com/presentation/d/1yQ6ikMQByTNS4_TCfdrkvY46LX61H8tJWfHOuZUZwNs/edit#slide=id.gd5219698b6_0_222)

## 2. FINAL APPROVERS

Role and Approval Detail	Name of Approval and Email	Title
Project Manager	Marianne Herbert marianne.herbert@deptagency.com	Project Manager
QA Lead	Maciej Siwak maciej.siwak@deptagency.com	QA Lead

## 3. DETAILS OF THE RELEASE

The Diageo Digital Product is a scalable solution that allows for the use of a global design system (Honeycomb), and a repository of components and services in the creation of new sites.

The DDP solution consists of infrastructure, content management system, scalable services & UI components - using the Honeycomb design system implementation. Using this suite of reusable components and services, any company can quickly and effectively develop and deploy websites and applications for any given brand.

A simplified version of the Tech Stack can be seen below:

### Dept Digital Ltd.

VAT IE8231285E

In simplified terms:

- Umbraco pushes content to MongoDB.
- NextJS queries this content using GraphQL via Realm API querying MongoDB.
- NextJS has no visibility of Umbraco. If the Umbraco node was inactive, the application would continue to run.

Below, please see a simplified view that demonstrates the flow of adding a component to a content page and viewing it on the corresponding frontend.

## 1. Add an available component in the Header or Body

### Dept Digital Ltd.

The features implemented are split into the following packages:

- @dept-ie/diageo-ui: Implementation of Honeycomb, UI service API.
  - Configurable theme / color palette
  - Customisable presentational layer, allows the application to override the implementation of specific UI sections e.g. cards
  - Customisable page section order e.g. notification, breadcrumb.
- @dept-ie/diageo-cms: Service API to request and extract data from the CMS.
  - CMS data function allows to selectively extract and transform relevant content.
  - API to extract most of the content type returned by Umbraco, e.g. images, referenced content without duplicating the logic.
- @dept-ie/diageo-services: Product and recipes API handlers, common middleware features.
- @dept-ie/diageo-ecomm: UI service API to interact with Shopify storefront API.
- @dept-ie/diageo-shared: Shared utility functions, e.g. assertions, HTML sanitization.
- @dept-ie/eslint-config-diageo: Linter config for Node, React and Jest tests to have a quality baseline.

The code is packaged using NPM. Any new release can be selectively adopted or not using the package version. When a release is made, if a backward incompatible change is introduced (outside of items in beta), the first number in the version will be incremented, other package versions should be safe to adopt.

Read more about semantic versioning (semver) on

<https://docs.npmjs.com/about-semantic-versioning>.

## 5. SPECIFIC EXCLUSIONS

### ADVANCED UI ANALYTICS

It would be complex to design a generic API being exposed to only one provider. Instead, a dedicated package can be added on the roadmap and the UI package can expose a generic API to support listening to different events.

## HAVAS MARKETING OPT-IN/CONTACT US FORM REQUEST HANDLER

Data sent to Havas or Salesforce differ from site to site (e.g. based on legislation). The service package provides helpers functions e.g. Recaptcha, HTTP header validation, error handler to facilitate the creation of backend request handlers.

## COMPLEX FORMS

Complex forms are not provided as needs would differ from sites to sites (e.g. based on legislation). Instead, form fields, inline feedback and a validation mechanism are provided to create forms tailored to the application requirements.

## SHOPIFY PLATFORM UI

UI components on the Shopify platform are not provided as it is a different architecture (non React).

## INJECTED COMPONENTS

Components injected by Horizon are out of scope as the styles and markup are not maintained by DEPT e.g. Age gate, cookies policy, footer.
